

Warranty For Voltage Stabilizer

Voltage stabilizer are the automatic voltage regulating machines which does not include moving part inside it. Static Voltage Stabilizers regulate voltage value in milliseconds with microprocessor controlled digital technology. There are no moving parts inside the device that will worn and require maintenance in time. However, in classic servo motor voltage regulators, there are moving and mechanical friction parts such as motor collectors, variable transformer brushes and brush bearings. These moving parts wear over time and the accumulation of dust in between the parts can cause fault in a short time. In addition, when the machine work continuously under load, transformer surface may become heat and wear and even voltage interruptions occur. In other words, the static stabilizers provide a long term use since the regulation is done electronically

- Warranty does not cover the following areas:
- Overcurrent - Output short-circuit.
- Wrong or third party installation.
- Overload side.
- Surrounding temperature / overheating etc.
- Visit at customer premises.
- Installation report and visit report must show for warranty claim.
- Transportation and labor cost .

Service Warranty does not include parts / outside spare parts / Software and transportation.

- ♦ Spare parts will provide by company
- ♦ Labor and service charges include in service warranty
- ♦ Software installation cost will charge

Note: Depreciation cost will be charged, incase of replacement.

Transportation cost, travelling cost and other related expense bear by the end user or customer.

Parts warranty period : _____ Service Warranty : _____ SR. No. _____
